EXPERIMENT – 01

OLD UI DESIGN

- **Flat & Dull UI**

o The overall interface uses a dark, plain background with minimal visual variety.
o Lacks engaging background imagery related to travel (e.g., destinations, airplanes).
o The UI feels static and does not create excitement or emotional connection for users.

- **Poor Visual Branding**

o The logo and brand name “Quick Flights” are repeated unnecessarily on both sides.
o Branding is not well-integrated into the layout, reducing professional appeal.
o No strong visual identity or theme consistency is observed.

• Low Contrast & Readability Issues

o Text is displayed in light colours over a dark background, but contrast is insufficient in some areas.
o Small font size for labels like Departure, Arrival, and Calendar affects readability.
o Important information does not stand out clearly from secondary text.

• Weak Visual Hierarchy

o The headline text (“IF YOU NEVER GO YOU WILL NEVER KNOW”) dominates too much space.
o Search inputs and action elements are visually less prominent.
o Call-to-action button (Search Flights) does not strongly attract user attention.

• Unstructured Layout

o The flight search fields are not clearly grouped or aligned.
o Spacing between elements is inconsistent, making the layout look scattered.
o Navigation icons (Hotel, Eats, Movies, Taxi) lack visual separation and emphasis.

• Icon & Navigation Issues

o Icons are small and lack descriptive labels clarity.
o Navigation bar appears disconnected from the main content area.
o Icons do not visually indicate interactivity.

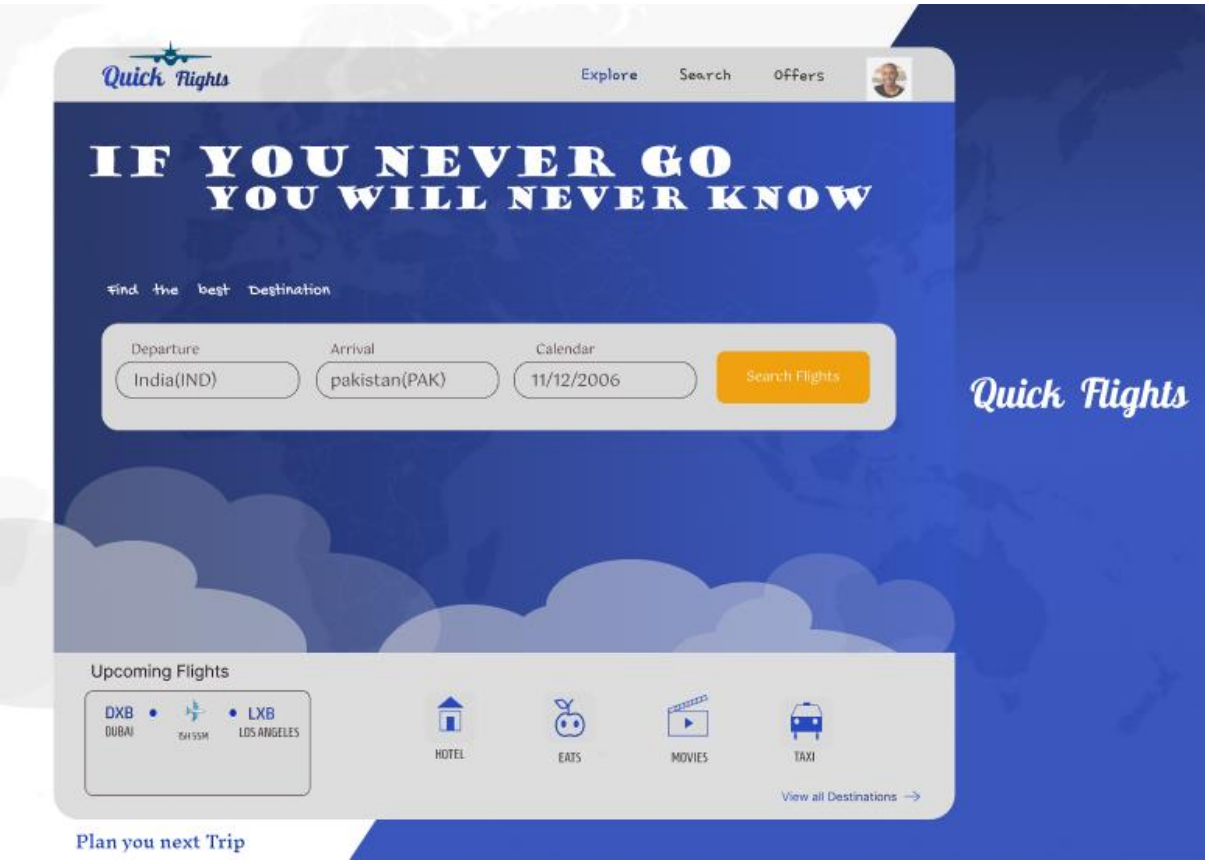
• Lack of User Engagement Features

o No user personalization options (profile, saved trips, recent searches).
o No visual feedback or animations to enhance user interaction.
o The interface feels informational rather than interactive.

• Single-Section Focus

o The design focuses mainly on flight search without showcasing offers or recommendations.
o No featured destinations or promotional content is highlighted.
o Limits user exploration and engagement beyond basic search.

MODIFIED UI DESIGN



Features & Enhancements Identified (Based on Improved Quick Flights UI)

• Header Background Image

o A visually appealing blue gradient background with cloud illustrations is used.
o The background enhances the travel theme and creates a more immersive experience.
o Adds depth and visual interest compared to a plain background.

• Improved Branding & Header Design

o The “Quick Flights” logo is clearly placed in the top-left corner.
o Navigation options (Explore, Search, Offers) are neatly aligned in the header.
o Profile avatar placement adds personalization and professionalism.

• Enhanced Search Bar Integration

o Departure, Arrival, and Calendar fields are grouped inside a rounded container.
o The search area is clearly highlighted, improving usability.
o Rounded input fields give a modern and user-friendly appearance.

• Call-to-Action Button (Search Flights)

o The “Search Flights” button uses a bright yellow colour for strong visibility.
o High contrast makes the button stand out from the background.
o Button placement encourages quick user interaction.

• Improved Layout & Typography

o Text is well-spaced and consistently aligned across sections.
o The headline text is prominent without overwhelming the interface.
o Font sizes are balanced, improving overall readability.

• Colour and Contrast Enhancements

o A blue-and-white colour scheme improves visual clarity.
o Important elements like buttons and input fields use contrasting colours.
o The design feels clean, modern, and visually pleasing.

• Upcoming Flights Section

o Displays upcoming flight details in a compact card format.
o Uses icons and labels (DXB → LXB) for quick understanding.
o Enhances functionality by showing relevant travel information upfront.

• Icon-Based Navigation Menu

o Icons for Hotel, Eats, Movies, and Taxi are evenly spaced and centered.
o Icons are clearer and visually consistent.
o Improves accessibility and quick navigation.

• Structured & Organized Layout

o Content is divided into clear sections (Search, Upcoming Flights, Navigation).
o Proper spacing and alignment reduce visual clutter.
o Overall UI feels balanced and well-organized.
